ECLIPSE SE IS YOUR EDISCOVERY MULTITOO

Right out of the box, Eclipse SE is a desktop powerhouse that solidly outperforms today's most widely used in-house review platforms. It seamlessly converts data formatted for Concordance from LexisNexis®. And if you need an extra boost, add one or more of Eclipse SE's optional modules to harness even more powerful features.

SE Streaming: Supercharge Your Review

SE Streaming provides the unmatched speed and data integrity users have come to expect from Ipro's streaming technology — in desktop software tailored for today's smaller, nimbler organization. By harnessing the power of Ipro's cutting-edge processing engine, SE Streaming can get high-quality data into review at least twice as fast as other industry-leading desktop applications.

SE Scan: Integrate Scanning into Workflows

Perform complete scanning jobs directly from Eclipse SE's user interface and keep powering through productions. Scan batches or seamlessly insert individual documents into families with numerous formatting options, and even apply OCR as you work. SE Scan lets you ensure quality by QC-ing random samples, and then applying de-skew, de-speckle and even more cleanup options.

Summation Migration: You've Got Options

The Summation Migration utility brings your entire Summation case into Eclipse SE, including all images, native files, transcripts and more. The migration process is simple and intuitive, and can be initiated from the Eclipse SE Admin interface. If you have multiple cases to bring into Eclipse SE, the Summation Migration utility also lets you migrate them without waiting to load case after case.

SE Print: The Print Shop at Your Desktop

With SE Print, your workflow is never disrupted when print jobs pop up. Designate a single workstation for printing, and then let SE Print do the rest. There's no waiting for jobs to spool to a printer. They're sent to a single location so your team avoid unnecessary starts and stops. For larger collections, SE Print's batch-printing function quickly handles jobs that might tie up resources.

SE Publish: Review Case Data Anywhere

SE Publish lets you access cases when there is no network access. This gives you the freedom to work while traveling, or to share cases with experts outside your environment. SE Publish creates stand-alone versions of your cases with an accompanying runtime version of Eclipse SE. Work product and other edits made in SE Publish can then easily be transferred back into your master case.

Your Advantage Starts Now

Start getting even more from an already powerful eDiscovery solution. Contact Ipro Tech today to discover all the ways Eclipse SE can empower your organization: (888) 477-6463 or sales@iprotech.com.
