

3 Ways to Cloud

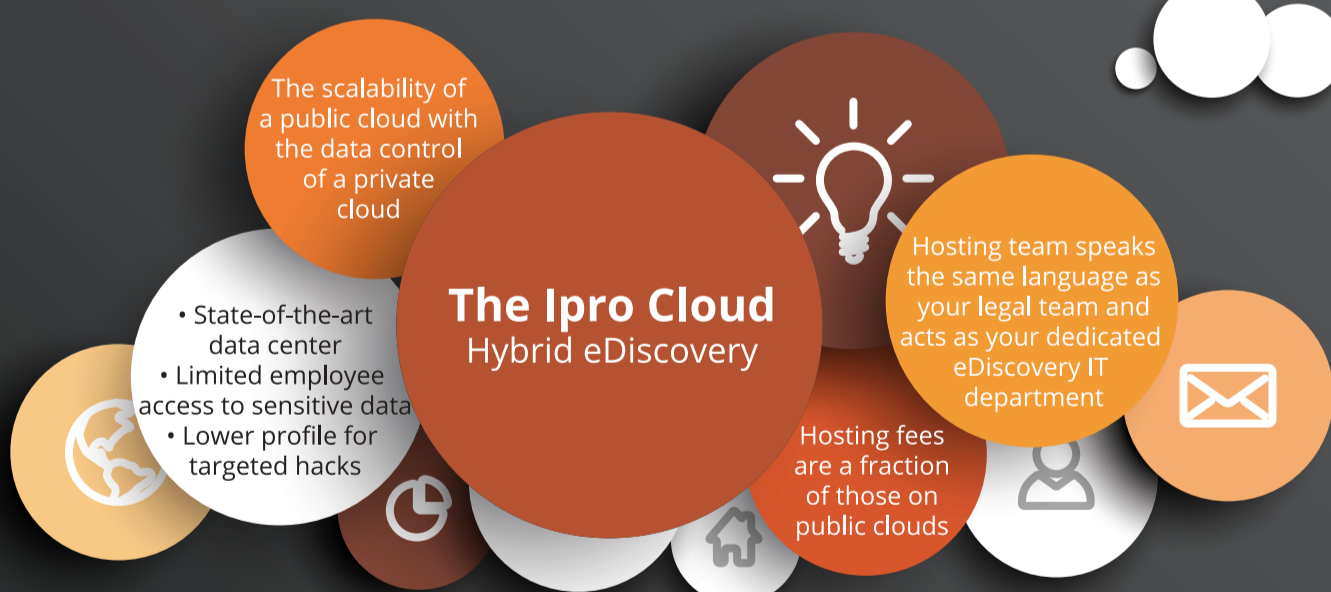

a look at the most common Cloud offerings in eDiscovery

Public clouds aren't just used for eDiscovery, so case data is in the same cloud as the data of large corporations and financial enterprises. Public cloud providers are experts in data security & IT management, but they aren't specialists in eDiscovery.

Management of eDiscovery data is fully with the user, which is an added benefit from a security and control standpoint. But the burden of maintaining an in-house system is heavy: managing hardware and software upgrades, maintaining an IT team that understands the needs of the legal department, securing against hacks and data breaches, while trying to recover costs and scale in the face of ever-growing datasets.

You secure and fully manage your own environment in the Ipro Cloud, but also get the benefit of a true technology partner. You can surge or dial back resources depending on data needs and can rely on Ipro's experienced services team when you need more personnel. Clients return again and again, because we specialize in building customized workflows for both simple and complex cases, while using our technology and advanced analytics to speed up processes through review with a focus on delivering quality results.

Learn how you can save more than 50% on your eDiscovery costs with Ipro: Contact us for a sales consultation!

Ipro is a 30-year legal technology veteran and hosts some of the biggest corporations and law firms in its cloud.
